Project Report

(CSE0001) Digital Literacy

Slot – D11

Class ID: BL2025260501190

Winter Semester 2026

Student Name: Nihal Muhammed

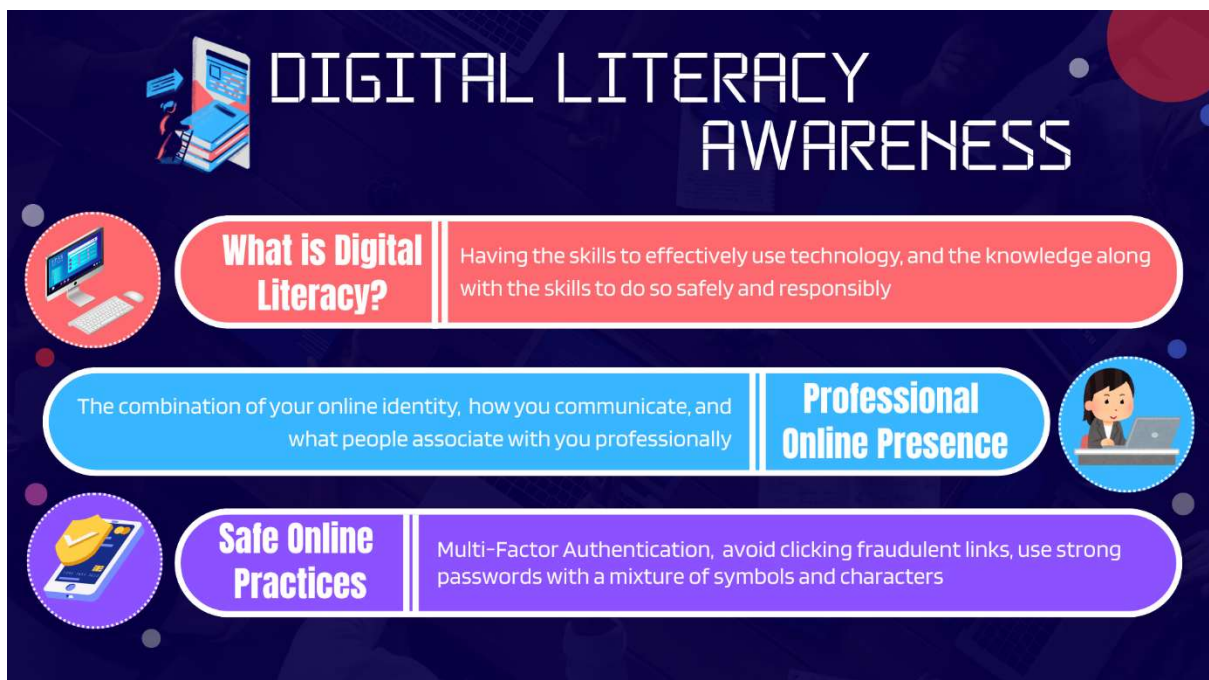

Registration No.: 25BSA10061

Guided By.: Dr.Kannan

Introduction

This project helped me to understand how important digital literacy is in our daily academic and personal lives. I learned what are digital tools and how to use them in a safe and responsible way. Through this project, I worked on a total of 5 different tasks like creating an infographic using Canva, building an online portfolio by creating LinkedIn, GitHub, Kaggle, and exploring coding platforms like HackerRank, writing professional emails following proper etiquette, and learning about cybercrime and how to prevent them. By working on this project, I also realized how important it is to maintain a professional online presence and stay in the loop of the latest advancements and risks online. Overall, this project helped foster my curiosity towards this course as it was a useful experience that will no doubt help me in my future.

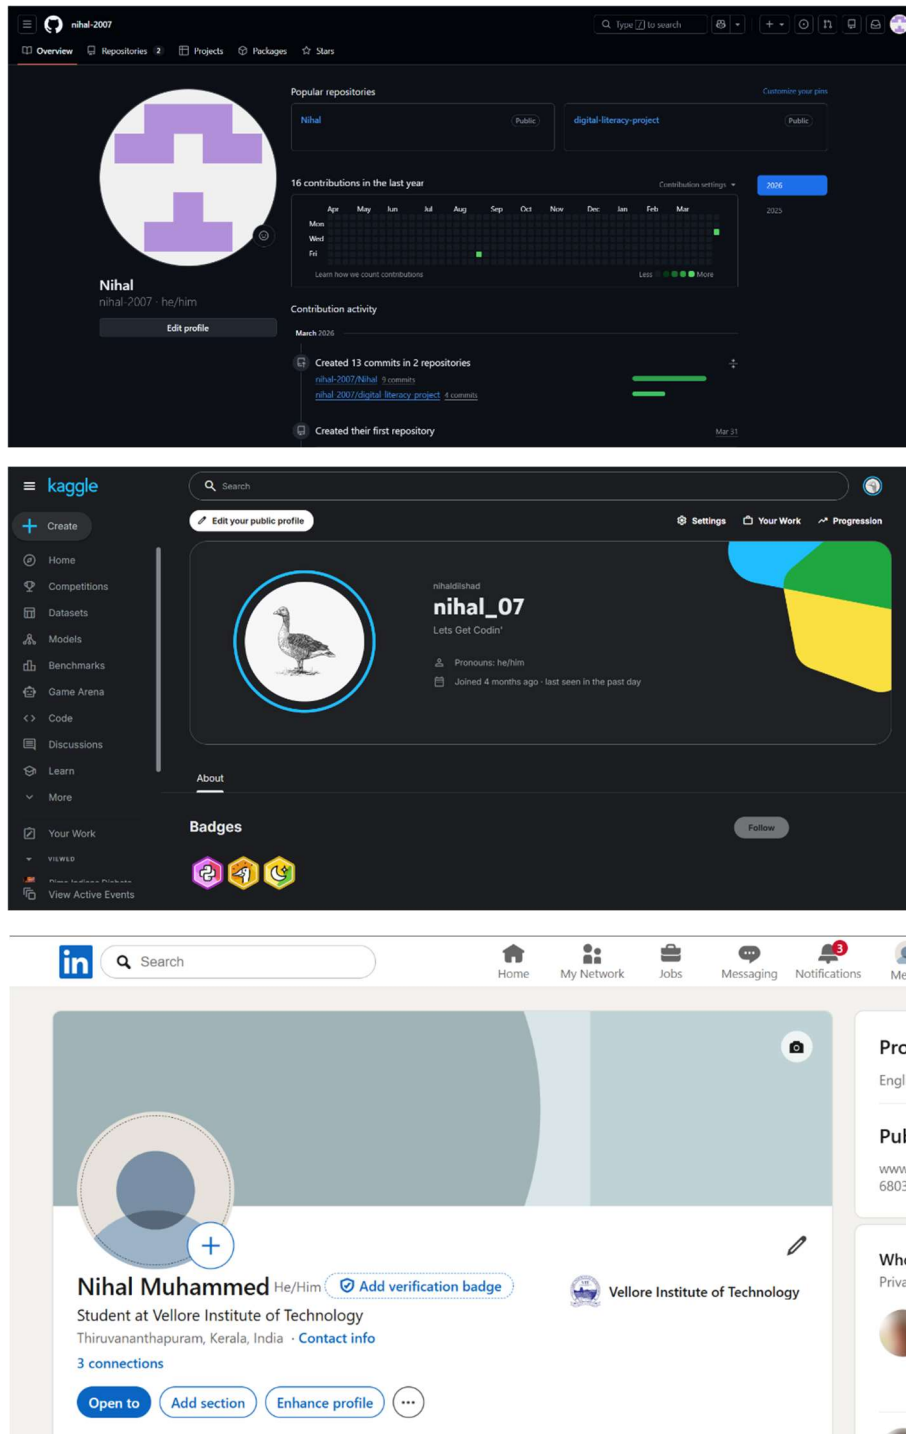

Task-1: Digital Literacy Awareness

For this task, I used to Canva to design a digital literacy awareness infographic. I chose Canva because of it's ease of use and it provide many templates and design options. In my infographic, I included three main sections: what digital literacy means, safe internet practices, and useful digital tools for students. I tried to keep the design clean and easy to understand by using a three-column layout, simple text and relevant icons.

While making this infographic, I realized how fun it was to experiment with different layouts and colours to make it visually appealing. At the same time, it was definitely a bit challenging to adjust the content in a limited space without making it look crowded. This task helped me understand how important it is to present information clearly and attractively so that others easily understand it.

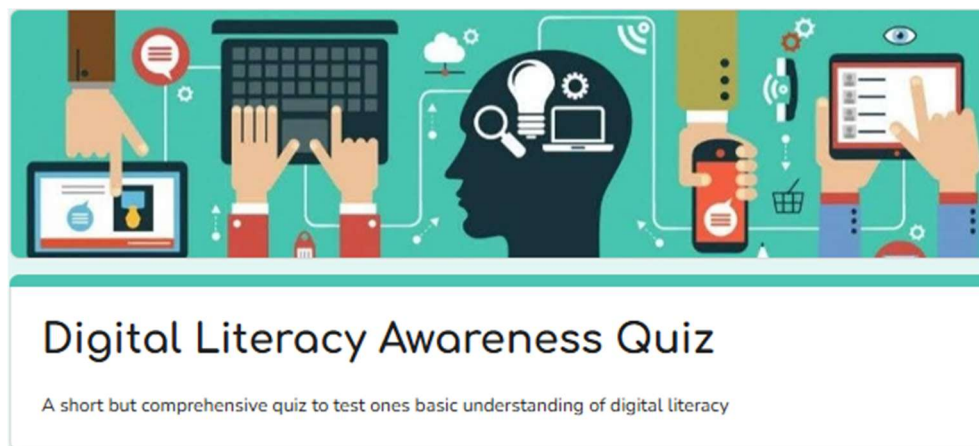

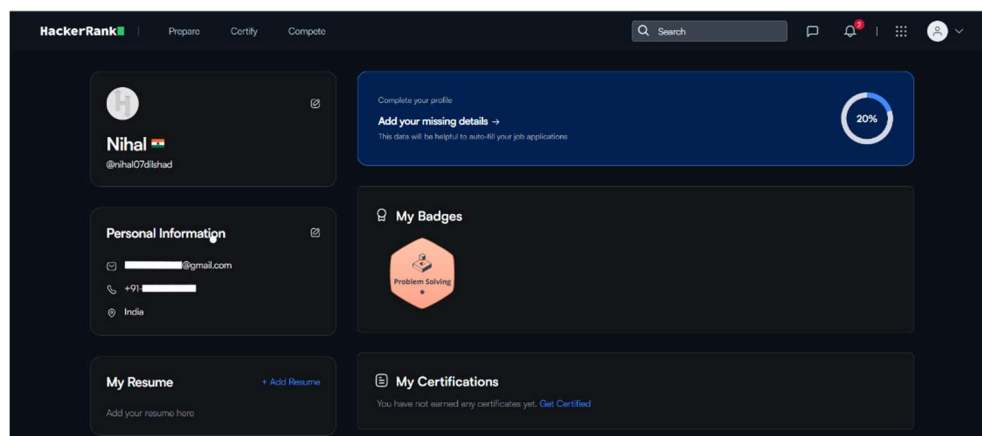

Task-2: Digital Portfolio

In this task, I created my profiles on GitHub, LinkedIn, and Kaggle to build my digital presence. GitHub is useful for storing and sharing coding projects, while LinkedIn helps in building a professional network and connecting with others. Kaggle is mainly used for learning data science and exploring datasets and working on them and running program on cloud.

I created a GitHub profile README where I introduced myself and mentioned my interests. On LinkedIn, I added my education details and created a basic professional profile. These platforms will be very helpful for me in the coming years. My plan is to upload my projects on GitHub, use LinkedIn to explore internship opportunities and the job market, and learn new skills through Kaggle. This helped to learn how to make a strong digital presence and how important it is in this time.

Task-3: Coding and Collaboration

Digital Literacy Awareness Quiz (Responses)						
File Edit View Insert Format Data Tools Extensions Help						
100% 123 Roboto 10 B I A						
A1	Timestamp					
	A	B	C	D	E	G
1	Form_Responses	Score	Name:	Registration Number:	1) Which device will you use to connect your i	2) Which of the following is an example of cl
2	3/31/2026 18:36:41	6 / 8	Ankesh raj	25BA11393	Modem	Windows Explorer
3	3/31/2026 18:36:41	8 / 8	Akshat	22362637	Modem	Microsoft Azure

In this task, I explored both coding and collaboration platforms. I created an account on HackerRank and solved a beginner-level problem. This helped me understand how competitive coding platforms work and gave me confidence in solving problems step by step.

For the second part, I created a Google Form with five questions related to digital literacy awareness. It included both MCQ's and short answer questions. I also checked the responses using Google Sheets, which helped me understand how data is collected and organized.

This task was interesting because it showed how these tools can be used in real academic situations, like conducting surveys or practicing coding. It helped me improve my technical skills and understanding of these tools.

Task-4: Professional Email & Etiquette Guide

In this task, I learned how to write professional emails properly. I wrote two emails: one to request an assignment extension and another to apply for a summer internship. This helped me understand how important it is to use a clear subject line, polite language, and proper structure in emails.

I also created a checklist of Do's and Don'ts for social media use. This made me realize how our online behaviour can affect our image. Poor communication, like sending unclear or informal emails, can create a bad impression or can hurt someone's sentiments. This task helped me improve my communication skills and understand how to behave professionally in digital environments.

Task-5: Cybercrime Awareness & Prevention

In the last task, I learned about cybercrime, especially ones relating to UPI and online payment exploitation. I understood how scammers trick people by creating urgency and asking them to share OTPs or enter their UPI PIN. What pleasantly surprised me was the fact that the ease with which people fall into such traps.

These tasks made me more aware and careful while using digital payment systems. I will now be more wary about suspicious sites and links and will never share sensitive information with anyone online. It also helped me understand that awareness is the best way to prevent cybercrime and helped me to figure out the ways to avoid cybercrime.

In Conclusion....

This project provided valuable insights into digital literacy and its importance in today's world. It helped me understand how to use digital tools effectively, communicate professionally, and stay safe online. I also learned the significance of maintaining a digital presence and being aware of cyber threats. Each task contributed to building practical skills that will be useful in my academic and professional journey. Overall, this project sharpened my confidence in this topic and in general in my use of digital platforms responsibly and effectively.
